FORT DODGE SUPPLEMENTAL PRICE LIST

MARCH, 1939

This price list covers all products described in the 1936 edition of the Fort Dodge catalog and supersedes our supplement dated December, 1937.

For full description of any product refer to **catalog page** that is plainly listed before the name of each item herein.

These prices are subject to a **Trade Discount** of 10% and **Cash Discount** of 2% with the exception of Anti-Hog Cholera Serum, Hog Cholera Virus, Dog Food, several drug items, and products of certain other laboratories.

Transportation Charges: With the exceptions noted above, and except a few drug or chemical items, we pay **ALL** transportation charges on orders of \$10.00 and upwards; or **ONE-HALF** the charges on orders between \$5.00 and \$10.00.

POLYVALENT MIXED BACTERIN (Equine)			
<i>Shaft</i>	Vial 50 Cc (10 doses)	.60	
<i>Whip</i>	Pkg. Six 3 Cc Syringes (18 doses)	2.50	

PULMONARY MIXED BACTERIN (Cattle)★			
Formula: Diphtheroids (bovine).....45%			
P. bovissepticum }.....45%			
P. bubalisepticum }.....45%			
Streptococcus pyogenes (bovine).....10%			

For the prevention and treatment of Hemorrhagic Septicemia of Cattle when complicated with Pulmonary Edema. Each 5 Cc dose contains 150 billion killed organisms.

<i>Brisket</i>	Vial 50 Cc (10 doses)	.60	
<i>Beef</i>	Vial 250 Cc (50 doses)	2.50	

PULMONARY MIXED BACTERIN (Sheep)★			
Formula: Diphtheroids (ovine).....45%			
P. ovissepticum }.....45%			
P. bubalisepticum }.....45%			
Streptococcus pyogenes (ovine).....10%			

For the prevention and treatment of Hemorrhagic Septicemia of Sheep when complicated with Pulmonary Edema. Each 5 Cc dose contains 150 billion killed organisms.

<i>Buck</i>	Vial 50 Cc (10 doses)	.60	
<i>Wool</i>	Vial 250 Cc (50 doses)	2.50	

VACCINES (For Large Animals)

PAGE 18

ABORTION VACCINE (Bovine) LIVE CULTURE

New packages and dosage. The B.A.I. recommends that this vaccine be used only upon calves from 4 to 8 months of age inclusive.

<i>Sire</i>	Package Six 5 Cc vials	1.50	
	Single vials will be furnished @ each	.30	
<i>Wake</i>	Vial 50 Cc	2.00	

ANTHRAX SPORE VACCINE (Intradermic)★

According to tests conducted by the United States Bureau of Animal Industry, vaccination with Anthrax Spore Vaccine (Intradermic) induces a solid immunity. These tests are reported in U. S. Department of Agriculture Bulletin No. 468. The vaccinated animals acquired immunity on the fourth day, and a high percentage carried a solid immunity for at least 360 days. The Bureau's tests were made to determine the comparative value of various anthrax immunizing agents.

FORT DODGE Anthrax Spore Vaccine (Intradermic) may be employed upon either horses, cattle or sheep. It is packaged as follows:

<i>Curb</i>	Vial 10 Cc (20 maximum doses)	1.00	
<i>Control</i>	Vial 50 Cc (100 maximum doses)	4.00	

★ Signifies addition since publication of Catalog.

PAGE 18

ECTHYMA VACCINE (Sheep) ★

<i>Mouth</i> Vial (100 doses).....	.75
<i>Jaw</i> Vial (500 doses).....	3.75

For the prevention of contagious Ecthyma (sore mouth) of sheep. Vaccination establishes an immunity which lasts for over two years, and practically eliminates screw worm damage on the range. The Vaccine should be employed only on ranges where the disease exists.

Our product is marketed in the dry form and is accompanied by a larger vial containing sterile diluent. The powder (powdered scab virus) is added to the diluent and the mixture is to be vigorously shaken. The "dose" of the Vaccine is approximately one drop of the solution applied with the stiff brush that is included in the package. A small area of the skin on the inside of the hind leg, or under the surface of the tail, is lightly scarified but not enough to draw blood. Then approximately one drop of the virus-diluent mixture should be vigorously rubbed into the scarified area.

Full directions for use accompany the Vaccine.

ENCEPHALOMYELITIS VACCINE, EQUINE

"Chick"

Western Type

<i>Banjo</i> Pkg. 1 treatment (two 10 Cc vials).....	1.50
<i>Best</i> Five treatments (ten 10 Cc vials).....	6.00

Eastern Type

<i>Cluck</i> Pkg. 1 treatment (two 10 Cc vials).....	1.50
<i>Cheep</i> Five treatments (ten 10 Cc vials).....	6.00

For the prevention of equine encephalomyelitis. Produced from chick embryos.

In view of the excellent results obtained from this type of vaccine in 1938, we have discontinued the production of the other type of equine encephalomyelitis vaccine, and are producing the "chick embryo" vaccine exclusively. One entire floor of the new four story addition to our biological laboratories is devoted to the production of this vaccine.

Fort Dodge Chick Embryo Vaccine produces a rapid and durable immunity and will protect horses against intracerebral injections of virulent virus. Write for literature.

LANG'S SOLUTION ★		
<i>Cecum</i>	Pkg. Six Vials 500 Cc.....	3.60
New intravenous treatment for cecal impactions of horses. Composition: Sodium Citrate 1 oz., Sodium Chloride 1 oz., Ringers Solution q.s. 500 Cc. The injection causes intense thirst and patient drinks several gallons of water immediately after treatment, which frequently softens the impacted mass.		

LENTIN (Merck) ★ (For Large Animals)		
<i>Lent</i>	Pkg. Six 4 Cc Ampoules (1:1000).....	3.30
<i>Murk</i>	20 Cc Rubber-stoppered Vial.....	2.20
Lentin is more effective than arecoline, being surer in action and more regular. Does not depress the circulation, and is safer than other quick-acting purgatives. Its action can be controlled by injections of atropine. Ordinarily purgation is induced in 20 to 30 minutes. Lentin (Merck) is also a useful therapeutic agent in atony of the bowel, tympanites and impaction or loss of tone of the rumen in cattle, sheep and goats. Directions for use accompany the package.		
For Lentin (Merck) for small animals see Page 17 of this supplement.

SODIUM IODIDE SOLUTION ★ (For the Treatment of Actinomycosis, Etc.)		
According to Farquharson (Journal A. V. M. A. Nov. 1937) the intravenous administration of Sodium Iodide is productive of a higher percentage of recoveries and more certain results than with any other form of treatment; it is safe to use; only one treatment is necessary; the cost is negligible; iodism is not produced; and bone lesions react favorably to its use. "Woody tongue" is relieved in twenty-four hours so the animal can eat and drink. Snoring due to deep seated pharyngeal abscesses shows rapid amelioration and symptoms soon disappear.		
Sodium Iodide treatment does not cause a loss of flesh in animals that are being fitted for beef; any slight decrease in lactation in dairy cows is but temporary; animals in which antinomycosis appears previous to shipment can be treated without any bad results or delay in shipment.		
FORT DODGE Sodium Iodide Solution is stable and is packaged in 500 Cc bottles. The dose is 250 to 300 Cc for 500-lb. animals; 1000-lbs., 500 Cc; 1500-lbs., 750 Cc.

For hemolytic streptococcal infections. Recent clinical and biological tests have indicated a favorable response to the administration of Sulfanilamide in the treatment of hemolytic streptococcal infections. It has definite therapeutic activity as shown by its bactericidal and bacteriostatic properties. We have received case reports of very fine results from the use of this drug in the treatment of acute infectious mastitis of cows. Reports suggest its value in pneumococcal infections, and meningococcal cases.

Dose: Initial dose, from $\frac{1}{2}$ to $\frac{3}{4}$ grain to each pound of body weight. Reduce dose 20% second day. Reduce another 20% third day. Then discontinue treatment and repeat in one week if necessary. Administer orally.

PAGE 93

ACRIFLAVINE COMPOUND OINTMENT

<i>Mast</i> Pkg. Twelve 1-Oz. Tubes (with 12 metal nozzles)	3.50
---	------

ALLANTOIN COMPOUND OINTMENT ★
(With Urea)

This ointment is prepared with a water-soluble base containing the well-known healing agents, Allantoin and Urea.

These ingredients, which are excretory products of maggots, are responsible for the beneficial results obtained from maggot therapy. They are particularly useful in the treatment of slow healing or non-healing wounds lined with indolent tissues, poor in circulation, and discharging pus.

Fort Dodge Allantoin Compound Ointment has many advantages over the aqueous solutions, or any other form of this medication. It lasts longer and does not require re-dressing so frequently.

Surface wounds may be treated by means of the special nozzle furnished with our 2-oz. tube, and are then covered with gauze. Deep wounds should be packed with gauze that has been saturated with the ointment, and covered with a dry dressing.

ARECO-CAINE TABLETS ★

Movie Bottle 100..... 2.35

Each tablet contains: Arecoline Hydrobromide ½ gr., Cerium Oxalate 2 grs., Procaine 1 gr., Bismuth Subnitrate 2 grs.

Here is a teniacide tablet that is bound to make a hit with our small animal trade. It is unique, there being nothing else like it on the market. It has anti-vomiting and anesthetic properties, the result being that dogs will keep the tablet down and will also receive the full benefit of the Arecoline without displaying any of the pain symptoms. In busy small animal hospitals this tablet will save at least one handling of the dogs where the veterinarian has been in the habit of giving preliminary medication before administering Arecoline. The tablets are creased down the center and are easily broken in two, so that ½ tablet can be given to puppies and kittens.

ALLANTOIN COMPOUND OINTMENT ★
(With Urea)

This ointment is prepared with a water-soluble base containing the well-known healing agents, Allantoin and Urea.

These ingredients, which are excretory products of maggots, are responsible for the beneficial results obtained from maggot therapy. They are particularly useful in the treatment of slow healing or non-

PAGE 124

healing wounds lined with indolent tissues, poor in circulation, and discharging pus.

Fort Dodge Allantoin Compound Ointment has many advantages over the aqueous solutions, or any other form of this medication. It lasts longer and does not require re-dressing so frequently.

Surface wounds may be treated by means of the special nozzle furnished with our 2-oz. tube, and are then covered with gauze. Deep wounds should be packed with gauze that has been saturated with the ointment, and covered with a dry dressing.

Fort Dodge Allantoin Compound Ointment (with Urea) is packaged as follows:

<i>Build</i>	Pkg. Twelve 2-Oz. Tubes.....	3.00
<i>Bull</i>	1-Lb. Glass Jar.....	.90

BURN OINTMENT

<i>Quartz</i>	1-Lb. Can.....	1.00
